Joomla 1.5 versions Error

Illegal variable `_files` or `_env` or `_get` or `_post` or `_cookie` or `_server` or `_session` or `globals` passed to script.

Solution:

The only solution that worked is to comment out the following line in the `request.php` file.

Find the file here:

```
{your_joomla_folder}/libraries/joomla/environment/request.php
```

And uncomment as follows:

```
// $failed |= is_numeric( $key );
```
